

Copy/Paste for Portrait Orientation Photos

Apple's built-in photo picker can cut the top or bottom off of photos that are in portrait orientation. Here's a way to work around that by copying the photo from your Photos app and pasting it into Pictello.

Open the Photos app on your device, and find the picture you want to use.

Tap the "Action" button ① (arrow coming out of a box) on the top right corner of the screen.

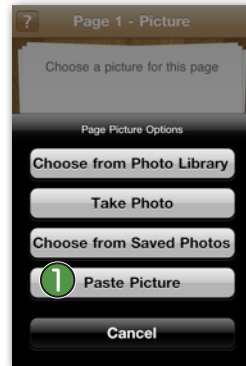

Tap the picture you want to copy ①. Only tap **one** photo.

A red checkmark ① will appear on the photo you selected. Tap the Copy button ② on the bottom center of the screen. This will copy the photo to the device clipboard without cropping the top and bottom of the photo.

Open Pictello and edit your story in either Wizard or Expert mode. This screen shot is in Wizard mode, but you can also use Expert. Tap on the picture frame ① to get choices for where to get a picture.

Select Paste Picture ① from the list of choices.

The full picture is now in the story. Repeat these steps, going back and forth between the Photos app and Pictello as often as needed for additional portrait orientation photos. You do not need to exit editing the story in Pictello to switch to the Photos app - Pictello will save your work for you automatically.

Here is how the picture will look in the finished story.
