About AssistiveWare®

www.assistiveware.com

AssistiveWare is the worldwide leader in innovative assistive technology software for Mac OS X. In close collaboration with individual and institutional users we have developed Mac-only solutions for people with physical, speech, language and vision impairments. Our software provides full access to the computer, allowing students and other people with disabilities to use the same entertainment, educational, productivity and creative software as everyone else. Full function demos can be downloaded from our web site.

Speech, Language and Reading Solutions

by  **AssistiveWare®**

- * Save time by converting documents to audio books for listening on your iPod or iPhone
- * Proofread your own texts to improve spelling and composition
- * Overcome reading difficulties by listening to selected text in virtually any application
- * Improve your pronunciation of foreign languages by listening to text on foreign web sites
- * Create personal podcasts using text to speech for narration
- * Natural-sounding voices in a language of choice included

Key features

- Listen to Text, Word, HTML, PDF, ODT and RTF files
- Control your listening experience with buttons to rewind, fast forward, jump to paragraph/sentence start or skip to the next one
- Create personal podcasts by converting text to audio files
- Create your own audio books by exporting to iTunes tracks
- Speak selected text in almost any application using the GhostReader tool palette or a keyboard shortcut
- Point your cursor at text in Safari, Mail, TextEdit and listen instead of read
- Includes high quality voices in a language of choice
- Universal Binary (PPC and Intel) requiring Mac OS X 10.4 or later
- * Note that for system-wide voices you need the bundle with Infovox iVox

“The voices are extraordinary, so life-like that one can imagine what the speaker looks like. The program is a terrific value and is truly in a class by itself.”

The Kleper Report on Digital Publishing

- * For anyone unable to speak or to speak clearly
- * Fully customizable communication solution
- * Create your own vocabulary with just drag and drop
- * Can also be used for symbol and image based communication
- * Includes natural-sounding Infovox iVox voices in a language of choice

Key features

- Multilingual speech solution including natural-sounding Infovox iVox voices in a language of choice
- Full-fledged text and image based communication system
- Allows rapid creation of fully personalized communication vocabulary
- Improved accessibility for people with visual impairments
- Speech feedback while typing in any application
- Talking word processor
- Resizable toolbar for vision impaired users
- Highly customizable user interface
- Universal Binary (PPC and Intel) requiring Mac OS X 10.4 or later

“Proloquo provides the kind of augmentative communication I always hoped for after I lost my own voice due to ALS/MND. Without Proloquo for speech and KeyStrokes for typing I would no longer be able to work!”

Walter Pfrommer, medical adviser in a healthcare IT project
